

Learn by Doing with CNA Clinical Simulations

CNA Simulations VR offers a suite of virtual clinical simulations for nursing assistant students in high school, community college, or trade school. Inspire student curiosity through an engaging, virtual clinical learning experience. Students integrate classroom theory with skills learned in the lab to practice providing care in a risk-free, clinical simulation environment.

Learn through experience

- Bridge the gap between clinical skill acquisition and caring for residents in clinical settings. Build empathy and communication skills by responding to fictional residents facing difficult situations.

Build confidence and competence

- Build student confidence as they refine both technical & soft skills through repetition and practice.

Problem-solving and Critical Thinking

- Students solve resident problems in real-time, building the basis for *critical thinking* in the clinical setting.

What CNA Simulations VR Offers:

- Complete 6 self-directed simulation modules on a phone, tablet, or laptop.
- Repeat simulation modules over and over to practice.

Each Simulation Module Has 8 parts:

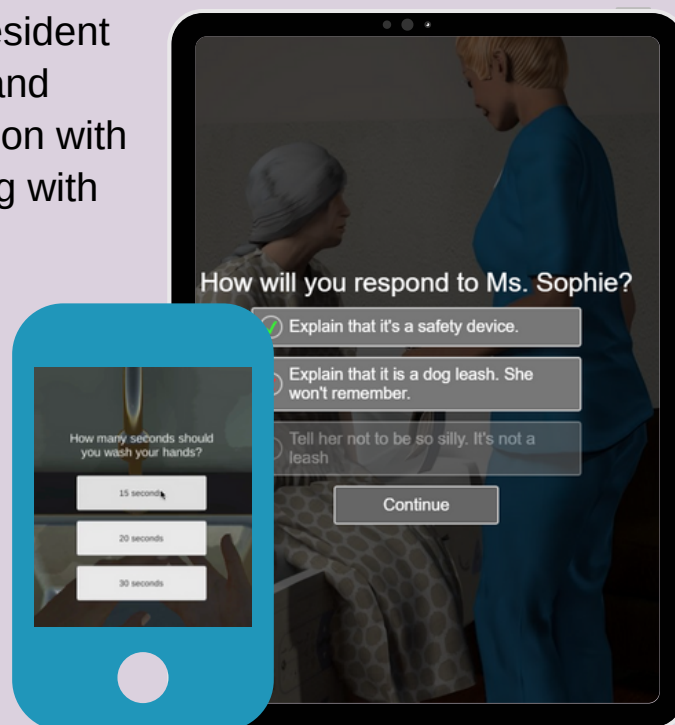

- **Care Plan:** Review the care plan to provide comprehensive care to the resident.
- **Pre-Assessment:** Assess pre-simulation knowledge and skills, while stimulating student curiosity about what's next.
- **Simulation:** Make decisions based on resident needs, while incorporating theoretical concepts learned in the classroom and skills learned in the lab. Some incorrect decisions move the student to a new Branch where they simulate and learn from the consequences of their mistakes in real-time.
- **Post-Assessment:** Assess post-simulation knowledge and skills.
- **Performance Analytics:** Review competency-based evaluations of student performance.
- **Documentation:** Document care and file incident reports.
- **Reflections:** Answer guided questions to reflect on decisions and examine assumptions made during simulation.
- **Debriefing:** Instructors use student evaluations and reflections to inform group reflective debriefings to improve students' critical thinking skills.

Six Modules (under development)*

1	Assisting with ambulation (gait belt)	Foot Care (chair)	Positioning a resident on their side
2	Modified range of motion (various)	Transfer from bed to wheelchair (gait belt)	
3	Mouth Care	Denture Care	Assisting a resident with feeding
4	Measuring & recording urinary output Bedpan use	Catheter care (female) Perineal care (female)	Applying knee-high elastic stockings Measuring an electronic blood pressure
5	Assisting a client to dress who has a weak arm	Giving a bed bath	Foot care (bed)
6	Donning and removing PPE (glove and gown)	Counting and recording: radial pulse, respirations	Measuring a manual blood pressure

*Modules include additional skills such as resident privacy and safety, hand hygiene, donning and doffing gloves, critical thinking, communication with the nurse (e.g. giving report), communicating with difficult residents, filing incident reports, documentation, and so much more.

2021 Annual Per Student Pricing*

	Annual Pricing	Early Bird Discount*	Discount Pricing	Available
2 modules	\$65	30%	\$45	Summer 2021
4 modules	\$125	30%	\$82.50	Fall 2021
6 modules	\$165	40%	\$99	Late Fall 2021

*We offer a money-back guarantee on pre-purchased modules if not delivered within 6 months.

A 5% volume discount is available for purchases of 100 or more student licenses. You may pre-purchase student and instructor licenses for up to 2 years. Each license lasts for one year, but must be used within a 2-year window.
